

# SLS 10 ULTRA PLUS

## Energy saving with high light transmission and diffusion

Ideal for saving energy both night and day, SLS 10 ULTRA PLUS combines good heat retention with high light diffusion and maximum transmission of light. This diffusion brings light to the plants from many angles, reducing overheating of upper areas and reaching the lower canopy of the crop. Its heat retention stabilizes greenhouse temperatures – minimizing dew on the crop and risk of fungal diseases.

All Svensson inside screens can be used under all types of greenhouse cover. Their unique knitted structure reduces condensation and allows them to be bundled to a small size for maximum available light. They are UV stable and remain clean and effective for a long time.

- ☀ = Light transmission in sunlight
- ☁ = Light transmission when overcast
- ≡ = Energy saving
