

# XLS F HARMONY REVOLUX

## Flame retardant screen for diffusion, shading and cooling

XLS F HARMONY REVOLUX is a white screen with an open structure for enhanced light diffusion and shading. On warm days it protects, cools, and brings light to the plants from many angles – stimulating growth. At night it helps reduce radiated heat loss, minimizing the formation of dew and the risk of fungal diseases. In cool climates it's often combined with an energy saving screen at night.

All Svensson inside screens can be used under all types of greenhouse cover. Their unique knitted structure reduces condensation and allows them to be bundled to a small size for maximum available light. They are UV stable and remain clean and effective for a long time.

REVOLUX is made from flame retardant materials alone, this is the optimum choice for all installations from a fire safety perspective. It meets the highest safety standard in the horticultural industry and test reports are available from various authorities.
