

# ILS HORTIROLL REVOLUX

## Flame retardant, rolling screen for blackout and energy saving

Designed for endurance and smooth rolling, ILS HORTIROLL REVOLUX offers blackout for the side walls of a greenhouse. The white surface helps to reflect light back onto the crop for enhanced growth and to reflect unwanted sunlight and heat away from the greenhouse. It is highly UV stable and remains clean and effective for a long time – making it ideal for dividing walls, too.

All Svensson inside screens can be used under all types of greenhouse cover.

REVOLUX is made from flame retardant materials alone, this is the optimum choice for all installations from a fire safety perspective. It meets the highest safety standard in the horticultural industry and test reports are available from various authorities.
